## We guarantee your long-term comfort

Professional skills, organisational ability, pioneering technologies, all-Italian creativity and attention to market expectations, anticipated with pioneering products: these are the factors that have established RADIATORS as a standard setter for the last 50 years.

Combining a meticulous finish with functionality, RADIATORS have a mission for innovation. With painstaking attention to technical detail and the materials used, they are designed with the most selective and demanding consumers in mind.

15

Year warranty hydronic products

2

Year warranty electrical parts

5

Year warranty electrical heating appliance

Laser welding

Available in a range of finishes

Fixing kit included

### EASY FIT

Concealed brackets kit included

Low temperature efficiency

Low consumption

Horizontal/Vertical installation

180° reversible

Wi-Fi connectivity

Automatic safety valve

### DRY

Dry inertia technology excludes the use of any convective fluid, heating the air directly.

### FLUID

Fluid technology replicates the feeling of warmth from a hydronic heating body.

# INDEX

## HYDRAULIC FUNCTIONING

With their exceptional heat output, hydraulic radiators guarantee all-round warmth. The wide range of modular solutions available with their elegant and distinctive design and numerous combinations of size and tube geometry adapt perfectly to every need and any type of home.

## ELECTRIC FUNCTIONING

Perfect for heating areas without a hydraulic installation, electric radiators provide rapid uniform heat without drying the air. Thanks to the numerous functions of the easy and intuitive electronic controls, consumption can be controlled to avoid wasting energy. Available in a wide range of models, they are quick and easy to install.

## AIR FLOW TECHNOLOGY

Our exclusive E-Flow technology gives your three products in one, adding the advantages of a traditional electric fan heater to our range of bathroom towel warmers. The fan heater can be used alone to heat small rooms quickly and efficiently, in combination with the towel warmer to increase output, or as just a towel warmer. Air Flow technology is available in combination with electric towel warmers E-Flow or with hydraulic towel warmers H-Flow.

## The right dimensions for every need.

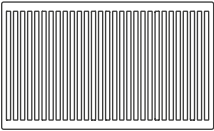

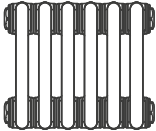

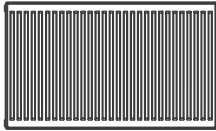

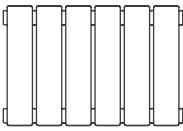

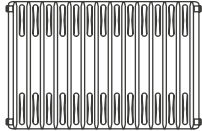

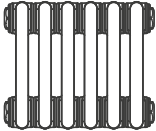

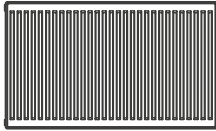

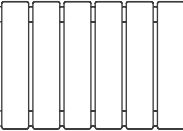

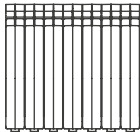

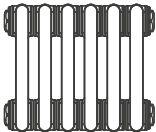

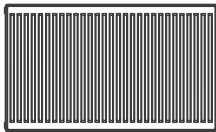

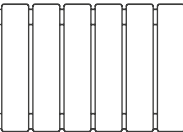

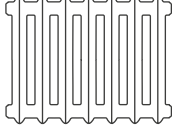

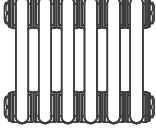

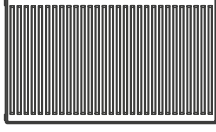

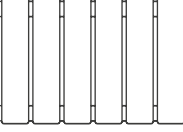

The wide RADIATORS range means you can always find the height corresponding to the pipe centre you want to replace.

The wide choice of different models testifies to the flexibility of the ranges able to satisfy all market demands.

The following table gives some of the main combinations of heating appliance to be replaced and corresponding RADIATORS product.

## Radiator to be replaced with corresponding Radiators product

Pipe centre of radiator to be replaced	Corresponding height RADIATORS range			
Panel	Multicolonna	Plattella	Linear	Mirò

Dimensions are in millimeters (mm)

The Multicolonna range stands out for its great design flexibility, allowing it to be adapted to any space or type of application to become a genuine interior design accessory able to add an intriguing touch to any room.

## Multicolonna range

The Multicolonna range stands out for its great design flexibility, allowing it to be adapted to any space or type of application to become a genuine interior design accessory able to add an intriguing touch to any room. It is available in 2, 3, 4, 5 and 6 column versions with heights from 300 to 2500 mm.

As well as the standard version, the range includes Multicolonna Integrated with thermostatic valve, Multicolonna Hygiene for installation in environments where cleanliness is particularly important, Multicolonna with cast iron, aluminium and bar pipe centre versions to replace old radiators and a special curved version of Multicolonna with welded feet.

## Innovation

RADIATORS was the first company to introduce laser welding for Multicolonna radiators. A pioneer in technological processes, it has set new quality standards and become an absolute point of reference in the world market.

## Quality and performance

The quality of Multicolonna is obvious whichever way you look at it. The glossy finish of the three-phase painting and soft rounded lines of the elements make it so attractive it becomes a genuine interior design accessory wherever it is installed.

Precise laser welding gives perfectly smooth shapes on the outside of the product and no welding residue inside. The line-end quality controls are stringent and rigorous to guarantee a product with a unique appearance and impeccable construction.

In-depth study of thermodynamic flows has optimised the product's conduction, radiation and convection processes, making it a reference point among tubular radiators, the best possible compromise between technology and product design.

## Painting

A particular feature of the Multicolonna range is the high-quality paint finish, thanks to an industrial process borrowed from the automotive sector. Colouring in White RAL 9016, complying with DIN55900.

## Certification and compliance marks

Multicolonna radiators are CE certified and meet the specifications required by the French NF standard. All heat outputs are measured and certified according to the European EN 442 standard.

## Warranty

Thanks to the high-quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee its hydronic products for 15 years.

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 46 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

Dimensions are in millimeters (mm)

H: height

I: pipe centre (H-70)

L: length with bungs fitted (no. elements x 46) + 26

## Standard Configuration

## Standard connections and accessories:

In the standard configuration, the Multicolonna radiator is delivered with 4 x 1/2" reducers and 1 x 1/2" blind plug pre-mounted. This configuration is highly versatile as it makes the product fully reversible. Vent and brackets not supplied as standard.

## Possible battery lengths:

Welded from 2 to a maximum of 40 elements.

For batteries above the dimensional limit, nipping can be carried out directly on site by ordering the relevant accessories.

## 2 Columns - Depth 66 mm - Heat outputs at $\Delta t$ 50 °C - Data table for complete batteries with reducers mounted

## Multicolonna 3 Columns

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 46 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

Dimensions are in millimeters (mm)

H: height

I: pipe centre (H-70)

L: length with bungs fitted (no. elements x 46) + 26

A = pipe centre compatible with aluminium radiators  
 G = pipe centre compatible with cast iron radiators  
 L = pipe centre compatible with bar radiators  
 ee = number of elements  
 \* = The indicated codes are NF certified

## Standard configuration

## Standard connections and accessories:

In the standard configuration, the Multicolonna radiator is delivered with 4 x 1/2" reducers and 1 x 1/2" blind plug pre-mounted. This configuration is highly versatile as it makes the product fully reversible. Vent and brackets not supplied as standard.

## Possible battery lengths:

Welded from 2 to a maximum of 40 elements.  
 For batteries above the dimensional limit, nipping can be carried out directly on site by ordering the relevant accessories.

## Multicolonna 4 Columns

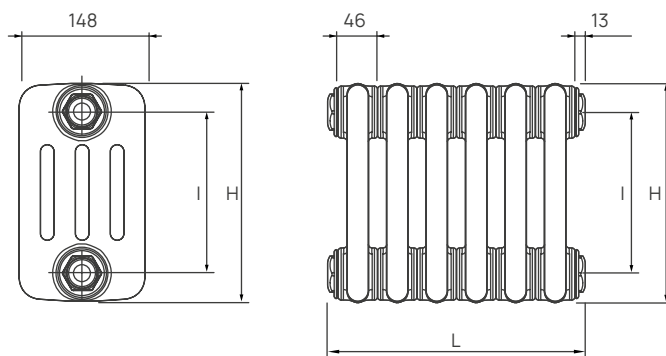

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 46 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

Dimensions are in millimeters (mm)

H: height

I: pipe centre (H-70)

L: length with bungs fitted (no. elements x 46) + 26

A = pipe centre compatible with aluminium radiators

G = pipe centre compatible with cast iron radiators

L = pipe centre compatible with bar radiators

ee = number of elements

\* = The indicated codes are NF certified

## Standard configuration

## Standard connections and accessories:

In the standard configuration, the Multicolonna radiator is delivered with 4 x 1/2" reducers and 1 x 1/2" blind plug pre-mounted. This configuration is highly versatile as it makes the product fully reversible. Vent and brackets not supplied as standard.

## Possible battery lengths:

Welded from 2 to a maximum of 40 elements.

For batteries above the dimensional limit, nipping can be carried out directly on site by ordering the relevant accessories.

A = pipe centre compatible with aluminium radiators

G = pipe centre compatible with cast iron radiators

L = pipe centre compatible with bar radiators

ee = number of elements

\* = The indicated codes are NF certified

## Standard configuration

## Standard connections and accessories:

In the standard configuration, the Multicolonna radiator is delivered with 4 x 1/2" reducers and 1 x 1/2" blind plug pre-mounted. This configuration is highly versatile as it makes the product fully reversible. Vent and brackets not supplied as standard.

## Possible battery lengths:

Welded from 2 to a maximum of 40 elements.

For batteries above the dimensional limit, nipping can be carried out directly on site by ordering the relevant accessories.

## 5 Columns - Depth 189 mm - Heat outputs at $\Delta t$ 50 °C - Data table for complete batteries with reducers mounted

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 46 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

Dimensions are in millimeters (mm)

H: height

I: pipe centre (H-70)

L: length with bungs fitted (no. elements x 46) + 26

A = pipe centre compatible with aluminium radiators

G = pipe centre compatible with cast iron radiators

L = pipe centre compatible with bar radiators

ee = number of elements

\* = The indicated codes are NF certified

## Standard configuration

## Standard connections and accessories:

In the standard configuration, the Multicolonna radiator is delivered with 4 x 1/2" reducers and 1 x 1/2" blind plug pre-mounted. This configuration is highly versatile as it makes the product fully reversible. Vent and brackets not supplied as standard.

## Possible battery lengths:

Welded from 2 to a maximum of 40 elements.

For batteries above the dimensional limit, nipping can be carried out directly on site by ordering the relevant accessories.

## 6 Columns - Depth 230 mm - Heat outputs at $\Delta t$ 50 °C - Data table for complete batteries with reducers mounted

## Multicolonna Hygiene

Immagine a scopo illustrativo

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 66 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

Dimensions are in millimeters (mm)

H: height

I: pipe centre (H-70)

L: length with bungs fitted (no. elements x 66) + 6

ee = number of elements

## Multicolonna Integrated

With Multicolonna Integrated the flow of water in the radiator can be controlled automatically according to the required room temperature, thanks to installation during production of a M23.5x1.5 thermostatic valve designed for mounting a thermostatic head.

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel  
Round vertical tubes, diameter 25 mm  
Element width: 46 mm  
Laser-welded manifolds  
Manifold thread 1"1/4 G rhs or lhs  
Working pressure 10 bar  
Test pressure 13 bar  
Maximum operating temperature 110° C

### 3/4" external thread

### 1/2" internal thread

**Pressure drop and valve regulation**

The setting for the thermostatic insert is obtained from the flow rate Q diagrams (expressed in kg/h) – Pressure drop Δp (expressed in bars or kPa). Starting from the Δt set in the system and the power of the radiator (EN442 standard output), the intersection with the pressure drop value on the X axis determines the nearest kv at which to set the insert (for example: position 3 or 4). Radiators with valve are provided with the insert in the N position (valve fully open). Instructions on adjusting the thermostatic insert are provided with every Multicolonna radiator. Multicolonna Integrated must NOT be tested with the valve closed, or the pressure plunger could break.

Code	Valve position
Standard configuration	
0Q01chhhhee0000	with built-in valve - top (side connection, 50 mm pipe centre, 3/4" external thread)
0Q02chhhhee0000	with built-in valve - bottom (side connection, 50 mm pipe centre, 3/4" external thread)
0Q01chhhhee00M0	with built-in valve - top (central connection, 3/4" external thread)
0Q02chhhhee00M0	with built-in valve - bottom (central connection, 3/4" external thread)
0Q01chhhhee00N0	with built-in valve - top (central connection, 1/2" internal thread)
0Q02chhhhee00N0	with built-in valve - bottom (central connection, 1/2" internal thread)

c = columns / hhh = height / ee = number of elements

**Configurations**

**Connections and accessories for side connection, 50 mm pipe centre**

The Multicolonna Integrated with **top valve** is delivered in the following configurations:

- 2 x 3/4" connections with external thread for Eurocones, 50 mm pipe centre.
- 2 x pre-mounted blind plugs
- 1 x pre-mounted 1/2" vent plug

**Connections and accessories for side connection, 50 mm pipe centre**

The Multicolonna Integrated with **bottom valve** is delivered in the following configurations:

- 2 x 3/4" connections with external thread for Eurocones, 50 mm pipe centre.
- 1 x pre-mounted blind plug
- 2 x pre-mounted 1/2" vent plugs

**Connections and accessories for central connection, 50 mm pipe centre**

The Multicolonna Integrated with **top valve** is delivered in the following configurations:

- 2 x 3/4" connections with external thread for Eurocones, 50 mm pipe centre
- 2 x pre-mounted blind plugs
- 1 x pre-mounted 1/2" vent plug

or

- 2 x 1/2" connections with internal thread, 50 mm pipe centre
- 2 x pre-mounted blind plugs
- 1 x pre-mounted 1/2" vent plug

**Connections and accessories for central connection, 50 mm pipe centre**

The Multicolonna Integrated with **bottom valve** is delivered in the following configurations:

- 2 x 3/4" connections with external thread for Eurocones, 50 mm pipe centre
- 1 x pre-mounted blind plug
- 2 x pre-mounted 1/2" vent plugs

or

- 2 x 1/2" connections with internal thread, 50 mm pipe centre
- 1 x pre-mounted blind plug
- 2 x pre-mounted 1/2" vent plugs

Central connection is available only for the even models.

## Multicolonna code

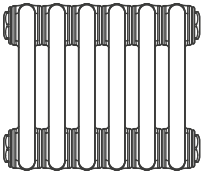

The Multicolonna code is mnemonic. The first 2 positions 0Q and the last position 0 are fixed.

The required model can be composed from a combination of numbers and letters, choosing the colour, model, columns, height, number of elements and configuration of the hydraulic connections according to the following table:

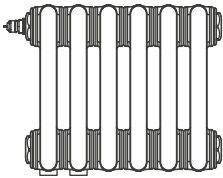

Code			Model
0Q			Multicolonna
F	=	0	Colour white
	=	1	Coloured - see table of finishes chapter
M	=	0	Standard
	=	1	With built-in valve – top
	=	2	With built-in valve – bottom
	=	A	90° version
	=	F	Welded feet
	=	H	Hygiene
c	=	2	Columns
	=	3	Columns
	=	4	Columns
	=	5	Columns
	=	6	Columns
hhhh			Height from 300 to 2500 mm
ee			Number of elements
AAA			Configurations and hydraulic connections - see page 34
0

### Mobile flow deflector

For opposing connections from the bottom, certain precautions must be taken to maintain optimum heat output, particularly with tall and/or short radiators. In this case, the water flow heats the radiator unevenly and we therefore recommend fitting a flow deflector in the intake to ensure the water flows towards parts of the radiator which would otherwise be cold.

The mobile deflector tested by Radiators is cylindrical with two holes in the end and a 1/2" thread for easy installation. Important: the maximum tightening torque is 40 Nm.

For the fixing kit, see page 252.

Example where use of the mobile deflector is recommended.

## Nippling

Multicolonna radiators can be ordered in a single battery with a maximum number of elements, depending on the height and columns. In the case of oversized installations, the radiators are supplied in blocks and must be assembled by nipping.

For the maximum number of batteries that can be assembled, see pages 12, 16, 20, 24, 28.

The minimum block that can be assembled consists of 2 elements.

Two or more blocks can be joined together. For the radiators to be nipped, the maximum tightening torque must not exceed 165 Nm. Use RADIATORS accessories for correct nipping.

Code	Description
730Q002000	2 x nipples with 2 gaskets
550Q141200	1"1/4 to 1/2" reducers (left side)
550Q241200	1"1/4 to 1/2" reducers (right side)
550Q010100	Blind plug
6180002000	Vent plug
550Q003100	Plastic key for mounting reducers
550Q864800	Nipple key

Nordic simplicity and minimalist lines:  
Plattella decorates and heats spaces with a more classical  
style, combining cutting-edge technology and energy saving.

## Plattella range

Plattella is characterised by a sober, linear, timeless style, conceived to heat rooms with different styles and uses.

In addition to their versatile style, the panel radiators also combine high energy efficiency with the ability to exploit medium to low temperature heat sources. Use of top quality steel, a state-of-the-art production process and a rigorously tested high-resistance glossy finish are just some of the elements that make this range of radiators a standard setter for reliability and versatility.

Plattella versions available:

- C4 Compact with 4 side connections
- C4 Special with special pipe centre
- V6 L with bottom side connection and 4 connections
- V6 C with bottom central connection and 4 connections
- V8 with bottom side connection, bottom central and 4 side connections
- C4 Hygiene and V6 Hygiene, for easy cleaning without sacrificing heat output.
- C6 Vertical with 6 connections, available in heights from 1400 to 2400 mm and widths from 300 to 900 mm.

## Innovation

With the largest MADE IN ITALY range of panels, RADIATORS has always been the Italian world leader in this product family.

## Quality and performance

Produced using highly automated moulding and welding processes and designed to maximise heat outputs with convection flows, the Plattella range also stands out for a number of special characteristics, such as rounded corners and screw-on side panels.

## Painting

A distinctive feature of the panels is their high-quality paint finish, thanks to an industrial process borrowed from the automotive sector.

The system used to paint the panels is divided into three phases:

- Hot degreasing and phosphatisation
- Electrophoretic dip coating to apply the base colour evenly in the innermost and outermost parts of the radiator, followed by baking at 185°C
- Epoxy powder coating and baking at 170°C to give the panels a smooth glossy finish. Colouring in White RAL9016, complying with DIN55900.

## Certification and compliance marks

The steel panels are CE, NF, RAL certified and all exposed thermal yields are measured and certified according to the European standard EN 442.

## Warranty

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee its hydronic products for 15 years.

## PLATTELLA C4 Compact

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella Compact is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" connections and 1 x installation kit including:
  - GB brackets
  - 1 x 1/2" blind plug
  - 1 x 1/2" vent plug
  - screws and anchors

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

## Note

## PLATTELLA C4 Special

Plattella C4 Special is designed to provide a radiant panel able to replace old aluminium radiators with particular pipe centres. Versions with special pipe centres are available for Compact models 22 and 33. The panel can be rotated so that the special pipe centre can be on either the right or left as required.

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella Compact is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" connections
- plugs and vent included

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Fixing kit not included.

### Reversibility

Double pipe centre:

- I1 = H-100
- I2 = H-60

## Note

## PLATTELLA V6 L

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G - 3/4" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatization
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella with right side connection is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" side connections
- 2 x 3/4" bottom connections, external thread, 50 mm pipe centre
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

The product comes with pre-installed plastic covers that must be removed before installation and, if necessary, replaced with caps that can be purchased separately.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

## Note

## PLATTELLA V6 C

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G - 3/4" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatization
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella with central connection is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" side connections
- 2 x 3/4" central bottom connections, external thread, 50 mm pipe centre
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

The product comes with pre-installed plastic covers that must be removed before installation and, if necessary, replaced with caps that can be purchased separately.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

# Note

## PLATTELLA C4 Hygiene

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatization
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella C4 Hygiene is delivered with:

- 4 x 1/2" connections and 1 x installation kit including:

- GB brackets
- 1 x 1/2" blind plug
- 1 x 1/2" vent plug

Model 10 does not include brackets.

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

## Note

## PLATTELLA V6 Hygiene

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatization
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella V6 Hygiene with right side connection is delivered with:

- 4 x 1/2" connections
- 2 x 3/4" bottom connections, external thread, 50 mm pipe centre
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

## Note

## PLATTELLA C6 Vertical

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bars

Test pressure 13 bars

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatization
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Plattella C6 Vertical is delivered with:

- top grille
- screw-on side panels for greater safety, model 10 excluded
- 4 x 1/2" bottom connections, internal thread, 50 mm pipe centre
- 2 x 1/2" upper connections, internal thread

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Installation kit including:

- GB brackets
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

# Connection method

Plattella C4 Compact - Plattella C4 Hygiene

## Two-pipe

The connection methods described here are symmetric.

Plattella C4 can be connected with a two-pipe connection as follows:

- high/low same side (all EN442 heat outputs are calculated and verified with this type of connection),
- high/low opposite side (the best way to connect panels longer than 1000 mm),
- low/low opposite side (this connection method reduces heat output by about 10%).

Two-pipe connection requires a thermostatic valve (possibly with thermostatic head) and lockshield.

## One-pipe (feed from a single connection point)

Plattella C4 can be connected with a one-pipe connection using the special flow deflector (2) inserted in the connection point (1) using the key (4).

To connect to a one-pipe installation, a one-pipe valve with probe (not available from RADIATORS) is required. The probe must have a maximum length of 11 mm and the length of the external probe and the thread inside the valve must not exceed 27mm (3).

## One-pipe connection kit

Code	Description
5380003300	Flow deector for one-pipe valve
611561	Flow deector key

## Pressure drop and valve regulation

### Two-pipe system

Diagram 1: Pressure drops for two-pipe system.

Pressure drops  $\Delta p$  are expressed in daPa and mbar

$$1 \text{ mm H}_2\text{O col.} = 0,0981 \text{ mbar}$$

Pressure drop diagram for PLATTELLA NT panels. The values are obtained with 1/2" G connection on one side only, basic models 11 K basic models 21 and 22 basic models 33

### One-pipe system

Diagram 2: Pressure drops for one-pipe system with flow deflector.

Pressure drops refer to panels with special valve for one-pipe system and including special flow deflectors. They are expressed in daPa and bar.

The pressure drop diagram shows the extreme pressure drop values for PLATTELLA NT panels for basic models 21, 22 and 33.

Bear in mind the requirements for special one-pipe valves.

## Connection method

Plattella V6 L - Plattella V6 C - Plattella V6 Hygiene

### Plattella V6 L e V6 Hygiene

Regulation is based on the 70/55-20 heat output of the radiator and the pressure drop of the insert mounted (0.1 bar). To reset if necessary, the value to be set for the thermostatic insert (two-pipe connection) can be obtained from the Q Flow Rate diagrams (expressed in kg/h). Pressure drop  $p$  (expressed in bar or kPa). Starting from the  $t$  set in the system and the power of the radiator (EN442 standard output), the intersection with the pressure drop value on the X axis determines the nearest kv at which to set the insert (for example: position 3 or 4).

### Plattella V6 C

The value to be set for the thermostatic insert (two-pipe connection) can be obtained from the Q Flow Rate diagrams (expressed in kg/h) - Pressure drop  $p$  (expressed in bars or kPa). Starting from the  $t$  set in the system and the power of the radiator (EN442 standard output), the intersection with the pressure drop value on the X axis determines the nearest kv at which to set the insert (for example: position 3 or 4).

### Two-pipe connection

V6 model can be connected to a two-pipe system using a straight or "L" distributor. Our range of distributors are provided with Eurocone insert for connection to the 3/4" externally threaded connections on the Plattella models. The nozzle on the distributors provided for draining the radiator can be connected to the draining device.

#### Two-pipe Distributors

Codice	Description
5580013600	Straight distributor - TWO-PIPE
5580013700	"L" distributor - TWO-PIPE
5580103500	Straight distributor - TWO-PIPE - designed for radiator drain
5580193600	"L" distributor - TWO-PIPE - designed for radiator drain

### One-pipe connection method (single-point connection method)

Plattella V6 model can be connected to a one-pipe system using a straight or "L" distributor. Our range of distributors are provided with Eurocone insert for connection to the 3/4" threaded connections on the Plattella V6 and V8 models. On the distributor side the by-pass must be regulated to define the water flow entering the radiator and the flow bypassing it to continue in the circuit.

#### One-pipe distributors

Code	Description
5580008200	Straight distributor - ONE-PIPE
5580008300	"L" distributor - ONE-PIPE

### Valve - part numbers

RADIATORS code	Presetting	Dimension
5580139900	NN	M23 x 1,5
5580140000	-	M30 x 1,5

# Connection method

Plattella V6 L - Plattella V6 C - Plattella V6 Hygiene

## Pressure drop and valve regulation (cod. 5580139900) - two-pipe system

"L" or straight distributors can be used in two-pipe installations.

These distributors incorporate two gate valves to intercept both the input and output flows. To ensure the thermostatic head maintains room temperature precisely, the built-in thermostatic valve must be adjusted to achieve a pressure drop of 0.1 bar in the radiator (use diagram 2).

### REGULATION

The value obtained from the diagram can be easily set on the thermostatic valve without tools:

- Remove the protective cap,
- Turn the adjustment ring until the pointer corresponds to the required value on the graduated scale (fig. 1).

The setting is continuous from 1 to 7 (fig. 2).

In position N, the valve is fully open.

Example:

- Model 21/600-1000
- Power = 1325 W
- With  $\Delta t = 15^\circ\text{C}$  and  $\Delta p = 0,1$  bar diagram 1 gives the valve setting value 3 (water flow)

## Pressure drop and valve regulation (rif. cod. 5580139900) - one-pipe system

For one-pipe installations, a straight or "L" distributor with adjustable by-pass is required. The thermostatic valve must be set to position N (radiators are normally marked with the valve in this position - the panels are factory preset). When the percentage flow rate in the radiator is known (with respect to the total flow in the installation), the no. of turns to be set on the by-pass can be obtained from diagram 1. The by-pass under the cover A of the distributor can then be adjusted using an Allen key by the number of turns indicated in the table. To know the pressure drop in the radiator, use diagram 2. Once the total flow in the installation and the percentage flow in the radiator are known, the pressure drop in metres water column or bars can be obtained.

Example:

- Given: Total heat flow in loop (5814 Watt)  
 $\Delta t = 10^\circ\text{C}$  (75/65°C)  
 35% flow rate in exchanger

Obtain: by-pass adjustment value and pressure drop in radiator

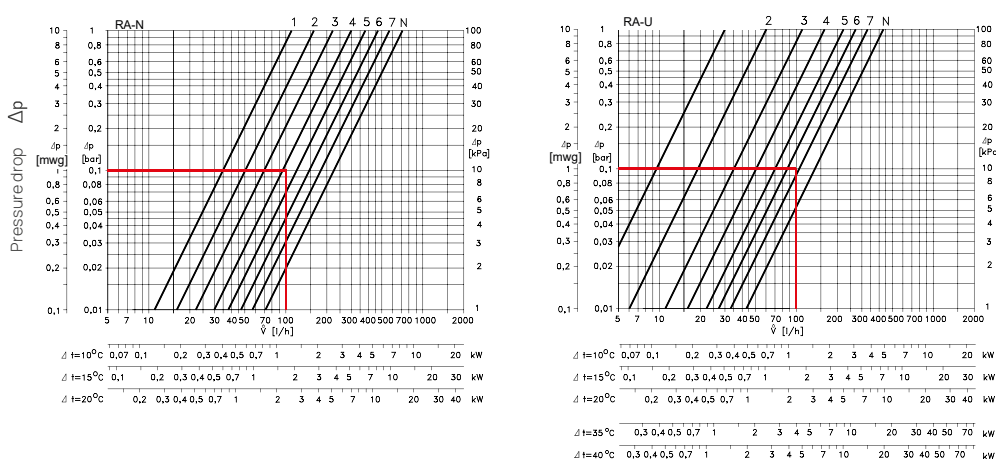

$$\text{Solution: Flow rate in loop } m = \frac{Q}{c \times \Delta t} = \frac{5814 \times 0,86}{1 \times 10} = 500 \text{ kg/h}$$

From table 1: no. of by-pass turns = 1 and 3/4

From diagram 2  $\Delta p = 0,1$  bar

The flow rate in the radiator can be regulated subsequently, including during operation. The distributor can also be used as a blind bridge if the radiator is mounted subsequently or dismantled, without having to empty the installation.

Diagram 2

# Connection method

## Plattella C6 Vertical

The Vertical panels can be connected to a two-pipe system as follows:

- top/bottom opposite side (1, 2),
- bottom/bottom opposite side (3),
- top/top opposite side (4) connections and in the configuration with bottom (5) or top (6) central connection.

The top/top opposite side connection (4) and top central connection (6) are applicable only and exclusively with the panel in configuration AA (top connection) as in this case there is a deflector installed in the radiator and it is without grille.

Configurations 3, 4, 5 and 6 are symmetrical with respect to the indications in the drawings below (the output and input indicated by the arrows can be reversed). Two-pipe connection with connections at the sides of the panel requires a thermostatic valve (possibly with thermostatic head) and lockshield.

When connecting with connections at the sides of the panel, the central connection must be sealed with two blind plugs.

### Configurations

When ordering, please indicate the desired configuration:

- AB bottom connection
- AA top connection

In the case of the top connection (AA), the 8 in the third to last position of the code must be replaced with a 9. Example: 0184214854 is a Vertical 21 1800x400 panel with bottom connections (AB); 0184214954 is a Vertical 21 1800x400 panel with top connections (AA).

#### CONFIGURATION AB

Bottom connection, with top grille

#### CONFIGURATION AA

Top connection, without top grille

### Fixing brackets

Vertical 300 mm wide panels are provided with a welded support at the back, but they nevertheless require fixing with 2 brackets, as do all larger widths.

## Total dimensions

### Plattella C4 Compact

		Dimensions per model (mm)				
		11	21	22	33	
Panel depth excluding back supports	A	63	66	100	157	
Total depth from back of support to front panel**	B	75	75	109	166	
Distance from back support to connection	C	40	42	59	59	
Distance from wall to centre of connection (mounting the panel radiator on the GB brackets provided as standard)*	D	54/64	57/65	74/81	74/81	
Total distance from wall to front panel (mounting the panel radiator on the GP brackets provided as standard)*	E	91/99	90/98	125/133	182/190	

\* The total distance changes depending on the depth of the side of the shelf chosen.

\*\* When calculating the total size occupied by the panel radiator (from the wall to the front panel) with the chosen wall brackets: the useful length of the chosen bracket must be added to this measurement.

### Plattella C4 Special

		Height (mm)		
		600	700	
Pipe centre side 1 (Special pipe centre)		500	600	
Pipe centre side 2		540	640	

### Plattella V6 L

		Dimensions per model (mm)

STEEL PANEL

Linear is designed to meet the most modern aesthetic standards, where elegance becomes a paradigm of streamlined, essential lines and where beauty is combined with technology and greete energy savings, thanks to the configuration of the product itself. An important touch of technological innovation and environmental sustainability.

## Linear range

Linear si caratterizza per l'estetica sobria, lineare e senza tempo che punta a riscaldare ambienti dal diverso stile e destinazione d'uso.

All'estetica versatile, i radiatori a piastra abbinano alto rendimento energetico alla capacità di sfruttare le sorgenti calde a medio-bassa temperatura.

L'utilizzo di acciaio della migliore qualità, un processo produttivo all'avanguardia, la verniciatura brillante e ad alta resistenza con rigorosi test, sono solo alcuni degli elementi che fanno di questa gamma di radiatori un riferimento in termini di affidabilità e versatilità.

Linear è disponibile:

- C4 Compact con 4 attacchi laterali
- C4 Special con interasse speciale
- V6 L con attacco laterale inferiore e 4 attacchi
- V6 C con attacco centrale inferiore e 4 attacchi
- C4 Igiene e V6 Igiene, per la facilità di pulizia senza rinunciare alla resa termica.
- C6 Vertical con 6 attacchi, sono disponibili con altezze da 1400 fino a 2400 mm e larghezze che vanno da 300 a 900 mm.

## Innovation

With the largest MADE IN ITALY range of panels, RADIATORS has always been the Italian world leader in this product family.

## Quality and performance

Produced using highly automated moulding and welding processes and designed to maximise heat outputs with convection flows, the Linear range also stands out for a number of special characteristics, such as rounded corners and screw-on side panels.

## Painting

A distinctive feature of the panels is their high-quality paint finish, thanks to an industrial process borrowed from the automotive sector.

The system used to paint the panels is divided into three phases:

- Hot degreasing and phosphatisation
- Electrophoretic dip coating to apply the base colour evenly in the innermost and outermost parts of the radiator, followed by baking at 185°C
- Epoxy powder coating and baking at 170°C to give the panels a smooth glossy finish. Colouring in White RAL9016, complying with DIN55900.

## Certification and compliance marks

The steel panels are CE, NF, RAL certified and all exposed thermal yields are measured and certified according to the European standard EN 442.

## Garanzia

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee its hydronic products for 15 years.

## LINEAR C4 Compact

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear Compact is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" connections

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

For coloured versions, please contact RADIATORS customer service

## Note

## LINEAR C4 Special

Linear C4 Special is designed to provide a radiant panel able to replace old aluminium radiators with particular pipe centres. Versions with special pipe centres are available only for Compact models 22 and 33. Unlike the shaped Plattella models, the Linear models cannot be rotated to locate the side 1 special pipe centre on the right or left. The codes in the table refer to the side 1 special pipe centre on the right.

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear Compact is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" connections
- plugs and vent included

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

### Reversibility

Double pipe centre:

- I1 = H-100

- I2 = H-60

### Technical specifications

Material: UNI EN 10130:2007 steel  
Channel pitch 33.33 mm  
Connection thread 1/2" G - 3/4" G  
Working pressure 10 bar  
Test pressure 13 bar  
Max. operating temperature 110°C  
3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear with right side connection is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" side connections
- 2 x 3/4" bottom connections, external thread, 50 mm pipe centre
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

The product comes with pre-installed plastic covers that must be removed before installation and, if necessary, replaced with caps that can be purchased separately.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

## Note

## LINEAR V6 C

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G - 3/4" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear with central connection is delivered with:

- top grille
- screw-on side panels for greater safety
- 4 x 1/2" side connections
- 2 x 3/4" central bottom connections, external thread, 50 mm pipe centre
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

The product comes with pre-installed plastic covers that must be removed before installation and, if necessary, replaced with caps that can be purchased separately.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

## Note

## LINEAR C4 Hygiene

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear C4 Hygiene is delivered with:

- 4 x 1/2" connections

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

## Note

## LINEAR V6 Hygiene

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear V6 Hygiene with right side connection is delivered with:

- 4 x 1/2" connections
- 2 x 3/4" bottom connections, external thread, 50 mm pipe centre
- 1 x installation kit including:
  - 3 x 1/2" blind plugs
  - 1 x 1/2" vent plug

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Fixing kit not supplied.

Thermostatic insert and thermostatic head can be ordered separately.

## LINEAR C6 Vertical

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel

Channel pitch 33.33 mm

Connection thread 1/2" G

Working pressure 10 bar

Test pressure 13 bar

Max. operating temperature 110°C

3-phase painting process:

- hot pretreatment and phosphatisation
- electrophoretic dip base coat
- epoxy powder finish coat

### Standard connections and accessories

Linear C6 Vertical is delivered with:

- top grille
- screw-on side panels for greater safety
- 2 x 1/2" bottom connections, internal thread, 50 mm pipe centre
- 4 x 1/2" connections, internal thread

The product is supplied with pre-assembled plastic lids that must be removed before installation and replaced with the supplied caps.

Installation kit including:

- GB brackets
- 3 x 1/2" blind plugs
- 1 x 1/2" vent plug

# Connection method

Linear C4 Compact - Linear C4 Hygiene

## Two-pipe

The connection methods described here are symmetric.

Linear C4 can be connected with a two-pipe connection as follows:

- high/low same side (all EN442 heat outputs are calculated and verified with this type of connection),
- high/low opposite side (the best way to connect panels longer than 1000 mm),
- low/low opposite side (this connection method reduces heat output by about 10%).

Two-pipe connection needs one thermostatic valve (with eventually one thermostatic head) and one holder.

## One-pipe (feed from a single connection point)

Linear C4 can be connected with a one-pipe connection using the special flow deflector (2) inserted in the connection point (1) using the key (4). To connect to a one-pipe installation, a one-pipe valve with probe (not available from RADIATORS) is required. The probe must have a maximum length of 11 mm and the length of the external probe and the thread inside the valve must not exceed 27 mm (3).

## One-pipe connection kit

Code	Description
5380003300	Flow deector for one-pipe valve
611561	Flow deector key

## Pressure drop and valve regulation

### Two-pipe system

Diagram 1: Pressure drops for two-pipe system Pressure drops  $\Delta p$  are expressed in daPa and mbar.

1 mm H<sub>2</sub>O col. = 0.0981 mbar

Pressure drop diagram for LINEAR panels

The values are obtained with the 1/2" G connection on one side only.

### One-pipe system

Diagram 2: Pressure drops for one-pipe system with flow deflector. Pressure drops refer to panels with special valve for one-pipe system and including special flow deflectors. They are expressed in daPa and bar. The pressure drop diagram shows the extreme pressure drop values for LINEAR panels for basic models 21, 22 and 33. Bear in mind the requirements for special one-pipe valves.

## Connection method

Linear V6 L - Linear V6 C - Linear V6 Hygiene

### Linear V6 Le V6 Igiene

Regulation is based on the 70/55-20 heat output of the radiator and the pressure drop of the insert mounted (0.1 bar). To reset if necessary, the value to be set for the thermostatic insert (two-pipe connection) can be obtained from the Q Flow Rate diagrams (expressed in kg/h). Pressure drop Cp (expressed in bar or kPa). Starting from the t set in the system and the power of the radiator (EN442 standard output), the intersection with the pressure drop value on the X axis determines the nearest kv at which to set the insert (for example: position 3 or 4).

### Linear V6 C

The value to be set for the thermostatic insert (two-pipe connection) can be obtained from the Q Flow Rate diagrams (expressed in kg/h) - Pressure drop p (expressed in bars or kPa). Starting from the t set in the system and the power of the radiator (EN442 standard output), the intersection with the pressure drop value on the X axis determines the nearest kv at which to set the insert (for example: position 3 or 4).

### Two-pipe connection

V6 model can be connected to a two-pipe system using a straight or "L" distributor. Our range of distributors are provided with Eurocone insert for connection to the 3/4" externally threaded connections on the Plattella models. The nozzle on the distributors provided for draining the radiator can be connected to the draining device.

#### Two-pipe Distributors

Code	Description
5580013600	Straight distributor - TWO-PIPE
5580013700	"L" distributor - TWO-PIPE
5580103500	Straight distributor - TWO-PIPE - designed for radiator drain
5580193600	"L" distributor - TWO-PIPE - designed for radiator drain

### One-pipe connection method (single-point connection method)

V6 steel panel can be connected to a one-pipe system using a straight or "L" distributor. Our range of distributors are provided with Eurocone insert for connection to the 3/4" threaded connections on the V8 models. On the distributor side the by-pass must be regulated to define the water flow entering the radiator and the flow bypassing it to continue in the circuit.

#### One-pipe distributors

Code	Description
5580008200	Straight distributor - ONE-PIPE
5580008300	"L" distributor - ONE-PIPE

### Valve - part numbers

RADIATORS code	Presetting	Dimension
5580139900	NN	M23 x 1,5
5580140000	-	M30 x 1,5

# Connection method

Linear V6 L - Linear V6 C - Linear V6 Hygiene

## Pressure drop and valve regulation (rif. cod. 5580139900) - two-pipe system

"L" or straight distributors can be used in two-pipe installations.

These distributors incorporate two gate valves to intercept both the input and output flows. To ensure the thermostatic head maintains room temperature precisely, the built-in thermostatic valve must be adjusted to achieve a pressure drop of 0.1 bar in the radiator (use diagram 2).

### REGULATION

The value obtained from the diagram can be easily set on the thermostatic valve without tools:

- Remove the protective cap,
- Turn the adjustment ring until the pointer corresponds to the required value on the graduated scale (fig. 1).

The setting is continuous from 1 to 7 (fig. 2).

In position N, the valve is fully open.

Example:

- Model 21/600-1000
- Power = 1325 W
- With  $\Delta t = 15^\circ\text{C}$  and  $\Delta p = 0,1$  bar diagram 1 gives the valve setting value 3 (water flow)

## Pressure drop and valve regulation (rif. cod. 5580139900) - one-pipe system

For one-pipe installations, a straight or "L" distributor with adjustable by-pass is required. The thermostatic valve must be set to position N (radiators are normally marked with the valve in this position - the panels are factory pre-set). When the percentage flow rate in the radiator is known (with respect to the total flow in the installation), the no. of turns to be set on the by-pass can be obtained from diagram 1. The by-pass under the cover A of the distributor can then be adjusted using an Allen key by the number of turns indicated in the table. To know the pressure drop in the radiator, use diagram 2. Once the total flow in the installation and the percentage flow in the radiator are known, the pressure drop in meters water column or bars can be obtained.

Example:

- Given: Total heat flow in loop (5814 Watt)  
 $\Delta t = 10^\circ\text{C}$  (75/65°C)  
 35% flow rate in exchanger

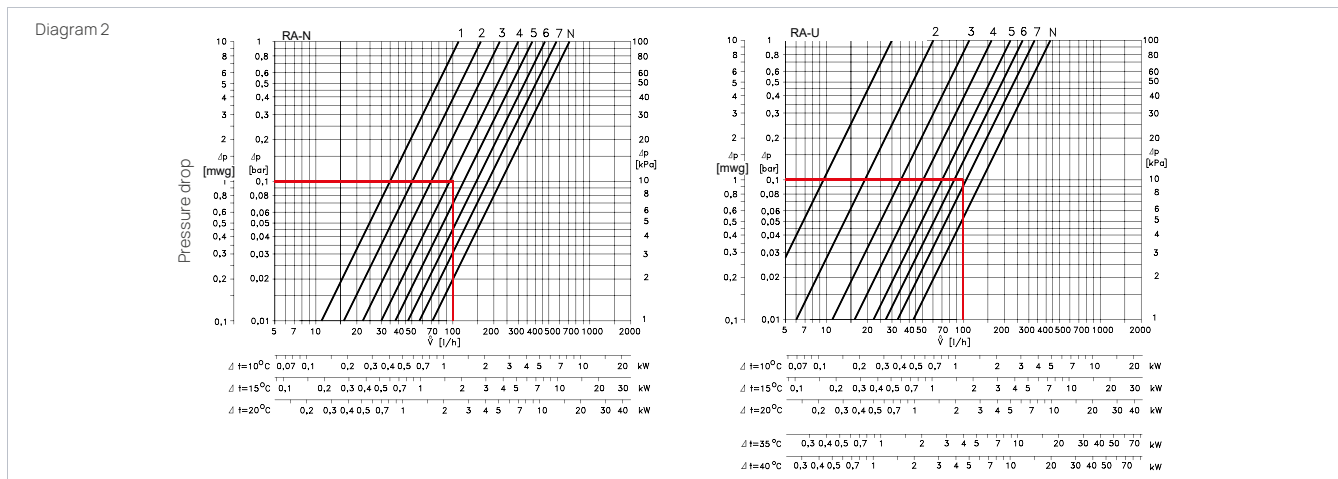

Obtain: by-pass adjustment value and pressure drop in radiator

$$\text{Solution: Flow rate in loop } m = \frac{Q}{c \times \Delta t} = \frac{5814 \times 0,86}{1 \times 10} = 500 \text{ kg/h}$$

From table 1: no. of by-pass turns = 1 and 3/4

From diagram 2  $\Delta p = 0,1$  bar

The flow rate in the radiator can be regulated subsequently, including during operation. The distributor can also be used as a blind bridge if the radiator is mounted subsequently or dismantled, without having to empty the installation.

# Connection method

## Linear C6 Vertical

The Vertical panels can be connected to a two-pipe system as follows:

- top/bottom opposite side (1, 2),
- bottom/bottom opposite side (3),
- top/top opposite side (4);

connections and in the configuration with bottom (5) or top (6) central connection.

The top/top opposite side connection (4) and top central connection (6) are applicable only and exclusively with the panel in configuration AA (top connection) as in this case there is a deflector installed in the radiator and it is without grille. Configurations 3, 4, 5 and 6 are symmetrical with respect to the indications in the drawings below (the output and input indicated by the arrows can be reversed). Two-pipe connection with connections at the sides of the panel requires a thermostatic valve (possibly with thermostatic head) and lockshield. When connecting with connections at the sides of the panel, the central connection must be sealed with two blind plugs.

### Configurations

When ordering, please indicate the desired configuration:

- AB bottom connection
- AA top connection

In the case of the top connection (AA), the 8 in the third to last position of the code must be replaced with a 9. Example:

0146214854 is a Vertical 21 1800x400 panel with bottom connections (AB); 0146214954 is a Vertical 21 1800x400 panel with top connections (AA).

#### CONFIGURATION AB:

Bottom connection, with top grille

#### CONFIGURATION AA:

Top connection, without top grille

### Fixing brackets

Vertical 300 mm wide panels are provided with a welded support at the back, but they nevertheless require fixing with 2 brackets, as do all larger widths.

# Total dimensions

## Linear C4 Compact

STEEL PANEL

# Towel Warmers

## Bathroom range

The RADIATORS range of bathroom radiators includes straight and curved towel warmers with round and flat tubes to offer products to satisfy the most diverse tastes.

The appearance of the towel warmers can be modified according to the end user's wishes as the range includes both chromed and coloured versions.

An electrification kit is available for each towel warmer, allowing it to be powered electrically for use either connected to the home's heating system or to the mains electricity supply to produce the warmth required to heat the bathroom quickly and independently.

The range also includes a number of models with central connection. Each bathroom radiator is supplied with an air vent and set of mounting brackets.

## Varnishing

The top quality painted finish of RADIATORS towel warmers is created using an industrial process from the automotive sector, giving each element a glossy long-lasting colour.

The colour is the characteristic Radiators RAL 9016 white, complying with DIN 55900.

## Certification and compliance marks

CE certified and all heat outputs are measured and certified according to the European EN 442 standard.

## Warranty

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee its hydronic products for 15 years.

## FANTASIA Linea White

## Note

# Design

## Design range

The RADIATORS range of Design radiators includes radiators such as Mirò and Monocolonna with a style both classic and at the same time simple, enabling them to fit in perfectly in rooms with a modern décor. They are supplied with the plugs and bracket kits required for installation.

## Innovation

RADIATORS Design radiators are conceived to become protagonists in your home. Distinctive elements characterised by shapes and colours that fit perfectly into both classic and modern spaces to meet the needs of the most demanding consumers. Heating appliances offering a combination of heat output and style. All Design radiators undergo stringent quality controls to guarantee the supply of mechanically safe products complying with the strictest European standards.

## Varnishing

The top quality painted finish of RADIATORS towel warmers is created using an industrial process from the automotive sector, giving each element a glossy long-lasting colour.

The colour is the characteristic RADIATORS RAL 9016 white. Complying with DIN 55900.

## Certification and compliance marks

CE certified and all heat outputs are measured and certified according to the European EN 442 standard.

## Warranty

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee its hydronic products for 15 years.

xx = RM = standard connections

xx = RC = central connections, 50 mm pipe centre, available only for models with even number of elements.

For coloured versions, change the seventh digit of the code from "0" to "9"

## MIRÒ 20 Horizontal

Image for illustrative purposes only

### Technical specifications

Material: UNI EN 10130:2007 steel  
 Straight flat tubes 70x11 mm  
 Round manifolds diameter 38 mm  
 Maximum working pressure 8 bars  
 Test pressure 5,2 bars  
 Maximum operating temperature 110° C

### Technical Connections and standard supply:

- 6 x 1/2" connections, internal thread  
 - Installation kit including:

- brackets
- 1 x 1/2" vent plug supplied as standard.
- 3 x 1/2" blind plugs supplied as standard.

Anthracite brackets are available for RAL finishes.

### Standard Configuration

Dimensions are in millimeters (mm)

## Technical specifications

Material: steel  
Straight tubes diameter 16 mm  
Round manifolds diameter 38 mm  
Maximum working pressure 8 bars  
Test pressure 10,4 bars  
Maximum operating temperature 110° C

## Technical Connections and standard supply:

- 6 x 1/2" connections, internal thread (four connections at the ends of the manifolds, two bottom connections).
- Installation kit including:
  - EASY FIT brackets
  - 1 x 1/2" vent plug supplied as standard.
  - 3 x 1/2" blind plugs supplied as standard

## Standard Configuration

Dimensions are in millimeters (mm)

EASY FIT

# Electric Towel Warmers

## Electric Towel Warmer range

The RADIATORS range of bathroom radiators includes heating appliances with a variety of geometries and styles.

The electronic controls used to operate the heating elements range from simple functional on/off switches to more sophisticated electronic thermostats with LCD display, remote control and various functions.

## Innovation

RADIATORS offers the widest range of electric radiators on the market thanks to its know-how and decades of experience in designing technical solutions for consumers.

The radiators are fitted with the exclusive ASV (Automatic Safety Valve) safety system to maintain the correct pressure inside the heating appliance, preserving its mechanical characteristics even when exposed to the high wear cycles typical of electrical appliances.

## Quality and performance

RADIATORS towel warmers are designed to meet a variety of different comfort requirements.

With electrical components subjected to strict quality controls, they offer either basic solutions or more complex versions able to control the towel warmer through thermostats with multiple functions.

The heating elements and thermostats are tested in limit conditions to verify the quality of the electrical components, the actual IP class and the electrical insulation, fundamental for the safety of radiators for installation in wet environments such as bathrooms.

## Verniciatura

The top quality painted finish of RADIATORS towel warmers is created using an industrial process from the automotive sector, giving each element a glossy long-lasting colour.

The colour is the characteristic RADIATORS RAL 9016 white. Complying with DIN 55900.

## Certification and compliance marks

European CE and Ecodesign compliance.

## Warranty

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee the electric components of its products for 2 years and the heating part for 5 years.

Straight

Oval manifolds 40 x 30 mm

Mains power supply supported: 230V AC, 50Hz

Class 2, IP34

### Mode and functions

For operating modes see chapter Mode and Functions.

### Standard supply:

- white digital thermostat
- fixing kit
- white cable, 1200 mm long, with plug
- white cable, 900 mm long, without plug

Dimensions are in millimeters (mm)

## Note

# Electric Radiators

## Electric Radiators range

The range of RADIATORS aluminium electric radiators offers powers ranging from 700 to 2000W.

The electronic controls can be used to regulate temperature and programme the radiator according to the user's schedule and needs, with a series of different operating modes and new functions for improved safety, energy saving and ease of operation.

## Quality and performance

RADIATORS aluminium electric radiators are the most suitable appliances for heating the home in electric heating systems or when you want to heat a room independently from the central hot water installation.

The aluminium structure exploits the metal's ability to absorb and release heat rapidly, warming the room faster than with a steel radiator. Aluminium radiators are lighter than the steel equivalent, facilitating wall mounting.

The heating elements and thermostats are tested in limit conditions to verify the quality of the electric components, the actual IP class and the electric insulation, fundamental for the safety of radiators.

## Certification and compliance marks

European CE conformity and compliance with the specifications required by the French standard NF and also NF PERFORMANCE ([www.certita.fr](http://www.certita.fr)), compliance with the Ecodesign standard.

## Warranty

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company able to guarantee the electric components of its products for 2 years and the heating part for 5 years.

FLUID

# Air Flow Technology

## **AIR FLOW TECHNOLOGY Range**

The RADIATORS Air Flow range includes 4 different types of towel warmer geometry, for combination with the fan heater, to fit in perfectly in any type of bathroom environment.

### **Innovation**

Our exclusive Air Flow technology gives you three products in one, adding the advantages of a traditional electric fan heater to our range of bathroom towel warmers. The fan heater can be used alone to heat small rooms quickly and efficiently, in combination with the towel warmer to increase output, or as just a towel warmer.

Air Flow technology is available in combination with electric towel warmers E-Flow or with hydraulic towel warmers H-Flow.

### **Quality and performance**

The RADIATORS Air Flow range is designed to meet a variety of different comfort requirements.

Meticulous study of the thermodynamic flows has allowed us to create fan heaters able to emit the right flow of hot air to heat all bathrooms quickly and comfortably.

A remote control is included with each fan radiator to adjust power and settings.

### **Varnishing**

The top quality painted finish of RADIATORS Air Flow range is created using an industrial process from the automotive sector, giving a glossy long-lasting colour.

The colour is the characteristic RADIATORS RAL 9016 white complying with DIN 55900.

## **Certification and compliance marks**

European CE and Ecodesign compliance.

### **Warranty**

Thanks to the top quality standards and implementation of automated control systems, RADIATORS is the only company that is able to guarantee its E-Flow products 2 years for electrical parts and 5 years for the heating body, while for H-Flow products 2 years for Electric parts and 15 years for the heating body.

## Technical informations for hydraulic connection - HYDRONIC TOWEL WARMER

Each towel warmer must be connected to the system with a valve and lockshield (or an integrated valve/lockshield kit with 50mm pipe centre in the case of radiators with central connection).

Each towel warmer must have a vent plug (always included in the package) at the top for venting.

All towel warmers must be connected with the supply and return pipes from the bottom (they cannot be connected with pipes from the top).

### One-pipe connection

Perpendicular connections from the bottom.

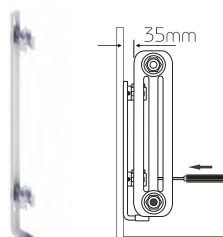

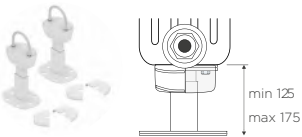

One-pipe installation with perpendicular connections requires:

- one-pipe valve (a) with adjustable bypass;
- the probe (b) must be inserted in the vertical manifold and must have a length equivalent to  $\frac{2}{3}$  the height (H) of the radiator in order to release the hot output water at a sufficient height.

The one-pipe valve can be straight or L-shaped to allow bottom or side connection.

## Electrical devices

The T piece has a 1/2" connection and must be connected to the valve (outflow point) of the radiator, while the lockshield must be connected to the opposite point of the radiator, as in the figure.

The radiator is thus always connected to the building's heating system and can be heated either with hot water from the installation or the electrical heating element in the kit. With the electrification kit, the installation must respect the following points:

Respect the following minimum distances when installing electric towel warmers:

- 600 mm from the floor to the thermostat (recommended)
- 50 mm between the radiator and the side wall
- from 50 to 70 mm between the back of the radiator and the wall

The radiator must never in any circumstances be installed:

- inside zone 1
- inside zone 2, if the control panel is accessible to someone having a shower or bath.

It must also be installed so that:

- it is not immediately under a power socket
- the pipes or cables cannot be damaged

The radiator must not be installed with the thermostat facing upwards. Respect the colours of the wires when connecting the appliance to the mains power supply.

Brown = Phase Blue/Grey = Neutral Black = Pilot Wire

If the home does not have a pilot wire system, the black wire must be cut. It must under no circumstances be connected to the earth connection.

For electrical connection, follow the further instructions given for installing electric towel warmers and fan radiators.

The electrical connection must be located at least 250 mm from the floor.

Dimension X for lockshields and valves in range = 45 mm

In installation methods 1 and 2 (see drawing), the wall connection point of the valve is at a different height from the lockshield connection point and is also shifted horizontally towards the inside or outside. This alters the distance between the two connection points. In installation method 3 (see drawing), the height of the two connection points is the same, as is the distance between them, but there is a shift to the right or left of 22.5 + X mm (thus 67.5 mm with the accessories in the Radiators range). On the other hand, if the lockshield and valve are both situated internally (or externally) with respect to the manifolds, the distance between them is reduced (or increased) by 45 + 2X mm (thus 135 mm with the accessories in the RADIATORS range).

## Installation

### Warnings for electrical connection

Make sure the power supply line is equipped with a device allowing the appliance (including the pilot wire if present) to be disconnected from the household mains, in compliance with the regulations in force. If installing in a bathroom, the power line must be equipped with a high sensitivity differential protection device with a rated differential tripping current of 30 mA. The power supply line and pilot wire control unit must be protected with the same differential.

The electrical connections must be located inside a junction box. In the case of wet rooms (kitchen, bathroom), the appliance must be connected to the circuit at a height of at least 25 cm from the floor. Strictly observe the electrical connection diagram in figure 1 (towel warmer without plug). If the pilot wire is not connected to the programming unit, it must be terminated and isolated. Do not under any circumstances connect the pilot wire to the earth. Make sure the power cable cannot come into contact with the surface of the appliance in any way (Fig.2).

## Mode and functions electrical devices

### **ASC**

This function detects the inertia of the room to reach the set temperature and turns the appliance on earlier to make sure the "Comfort" temperature is reached at the set time.

### **Override 2h**

The appliance heats for two hours at maximum power, irrespective of the set temperature. Two hours after activation, the "Override (2h)" function is deactivated automatically and the appliance switches back to "Comfort" mode.

### **Keypad lock**

The control keypad can be locked to prevent accidental changes.

### **"Eye" presence detector**

"Eye" mode is activated after no movement has been detected in the room for 60 minutes and automatically sets the temperature to the value chosen for "night/eco" mode.

### **Standby**

In "Standby" mode, the icon, time and day of the week are displayed. All modes, including "pilot wire", are suspended, but power to the appliance remains on waiting to receive the next command.

### **Pilot wire**

The temperature is programmed via the "pilot wire" controls.

### **Comfort**

"Comfort" temperature corresponds to the temperature chosen by the user

### **Open Window**

The "Open Window" function enables the appliance to automatically detect when a window is opened near the towel warmer (for example, when cleaning the house) and to switch to "anti-freeze" mode to prevent unnecessary heating and avoid wasting energy. Similarly, it can detect when the window is closed and restore the operating conditions set previously.

### **Child Safety**

When the "Child Safety" function is activated, the surface of the appliance is cooler than in normal operation in the currently active mode ("Comfort", "Night/Eco"... ) to avoid the risk of burns caused by brief accidental contact.

### **Cycle**

The appliance heats for 60 minutes at maximum power, regardless of the temperature set previously.

### **Night/Eco**

"Night/Eco" mode maintains a comfortable temperature with lower energy consumption.

### **Anti-Freeze**

In anti-freeze mode, the minimum temperature is set to 7°C. The appliance comes on automatically at ambient temperatures below 7°C.

### **Energy Saving**

This reduces consumption if there is no-one in the room. The temperature is set at 17°C.

### **Holiday**

If you are away from home for a given number of days, you can set the appliance to remain in "anti-freeze" mode during the entire period of absence and automatically reactivate in the previously selected mode when the set number of days has elapsed.

### **Behavioural indicator**

This function allows you to check whether the set temperature is in line with the recommended temperature to avoid waste and reduce energy consumption.

### **Instantaneous power indicator**

The instantaneous power icon provides an immediate indication of radiator power use (each section represents 20% of the power).

### **Fan heater**

The fan heats for 15-30-45-60 minutes, regardless of temperature previously set.

### **Chrono**

In this mode, you can select one of the three pre-set chrono-thermostat programmes or the custom programme. The latter lets you set a daily and weekly programme with two temperature levels ("Comfort" and "Night/Eco").

# Chemical treatment of the water in the heating system

## THE DESIGNER

The designer (if there is a project) or the installer must obligatorily incorporate a water treatment system in the installation to protect new and upgraded heating systems in compliance with the following two legislative requirements:

NORMATIVE REFERENCE: Italian Presidential Decree no. 412 of 26 August 1993 (updating Presidential Decree no. 551 of 21 December 1999)

- Art. 5(6): Within the limits and with the specifications indicated in the standard itself, application of the UNI 8065 technical standard relating to water treatment systems is mandatory for newly installed heating systems with a total power greater than or equal to 350 kW.  
NORMATIVE REFERENCE: "MINIMUM REQUIREMENTS DECREE" - Italian Ministry of Economic Development Decree of 26-06-2015 - Ordinary Supplement no. 39 of OJ No. 162 of 15-07-2015. "Application of methodologies for calculating energy performance and definition of the prescriptions and minimum requirements for buildings" Extract of text: Ann.1- Chapter 2.3- point 5 "Water treatment for heating and hot water systems": Regarding the quality of the water used in heating systems for winter air conditioning, with or without the production of domestic hot water and without prejudice to application of the UNI 8065 technical standard, chemical conditioning treatment is always mandatory. For systems with a firebox heat output of more than 100 kW and supply water with a total hardness of more than 15 French degrees, a water softening system is mandatory. With regard to the above treatments, reference is made to the technical standard UNI 8065.

## THE INSTALLER

The installer must obligatorily provide the installation with an appropriate water treatment system to protect new and upgraded heating installations and must complete compilation of pages 2 and 14 of the Log Book.

NORMATIVE REFERENCE: Ministerial Decree of 10-2-2014 - Models of air-conditioning system log books and energy efficiency reports pursuant to Presidential Decree no. 74/2013. (Published in Official Journal no. 55 of March 7 2014) As of 15 October 2014, heating systems must be provided with a new "air-conditioning system log book", complying with the model in Annex I of the Ministerial Decree of 10/02/2014. Pages 2 and 14.4 are dedicated to the mandatory nature of water treatment systems to protect heating installations for winter air conditioning.

## THE MAINTENANCE TECHNICIAN

When verifying the energy efficiency of the installation, the maintenance technician must also verify the presence and functionality of the water treatment systems (appliances and chemical conditioners) and complete compilation of the energy efficiency annex under point C.

NORMATIVE REFERENCE: Presidential Decree 74/13 "regarding operation, management, control, maintenance and inspection of heating systems for winter and summer air conditioning and for the preparation of domestic hot water".

Article 8(c) of the decree specifies that, during the periodic inspections, the boiler maintenance technician must also verify the presence and functionality of the water treatment systems. In addition to the usual energy performance tests by flue gas combustion analysis, the "boiler check" must include mandatory verification of the equipment and products used to protect the heating circuit and domestic hot water system.

## STANDARD UNI 8065:2019 EXTRACT

4. Typical problems associated with a heating system and possible remedies Definition of the limit characteristics for the water used in heating systems aims to eliminate or substantially reduce the problems associated with, or attributable to, the water in these installations. Such problems may seriously affect the efficiency of the installations and lead to substantial energy loss and can be summed up as:

- lime scale (ref.: "precipitation and deposition of the salts responsible for water hardness on the walls");
- corrosion (ref.: "electrochemical process causing loss of the surface of a metal, possibly leading to its perforation");
- deposits (ref.: "the result of the precipitation of insoluble organic and inorganic substances");
- biological growths (ref.: "forms of organic life, usually classified in algae, fungi, moulds and bacteria").

**Lime scale** This reduces the efficiency of the installation and heat exchange, clogs pipes and often triggers corrosion. Lime scale is avoided by chemical stabilisation and/or softening with ion exchange resins.

**Corrosion** in general is an electrochemical process causing loss of the surface of a metal, possibly leading to its perforation. Corrosion is controlled by specific or multipurpose chemical treatment.

**Deposits** Unlike lime scale, these are not coherent, but they can however cause the same problems as described above. Deposits are avoided by filtering the inflow water, an appropriate flushing routine and chemical treatment of the water in the circuit.

**Biological growths** ... autotrophic bacteria (for example, iron-oxidising and sulphate-reducing bacteria) are of especial importance and particularly feared as they may be the direct cause of localised corrosion. Biological growths are mainly treated through the use of biocides.

### Characteristics of the water for heating systems

**Prescribed treatments:** Chemical treatment is necessary for all installations.

**Characteristics of fill and top-up water:** The water used to fill and top-up heating systems must be clear with a total hardness of less than 15°F. Please note. For heating systems with a power of less than 350 kW (300,000 kcal/h), if the hardness of the fill or top-up water is less than 35°F, the softener may be replaced by suitable chemical treatment.

**Characteristics of the water in the circuit:** The water in the circuit must be as clear as possible, with a pH of more than 7 (for radiators with aluminium and light alloy elements, the pH must be less than 8). Water softeners must be used in the concentrations prescribed by the suppliers. The concentration of iron must be less than 0.5 ppm, while for copper, the concentration drops to <0.1 ppm.

## NEGATIVE EFFECTS OF THE FAILURE TO CLEAN THE HEATING SYSTEM

In the absence of appropriate prevention and protection against the above, the following problems may occur in the heating system:

- Premature wear and breakage of components
- Corrosion caused by reactions between the metals or manufacturing/installation residues
- Noise in the radiators caused by the formation of hydrogen
- Noise in the boiler caused by clogging of the heat exchanger
- Poor circulation caused by the presence of lime scale, sludge and metal residues

This reduces the flow rate in the installation and increases the stress on the boiler (in other words, higher consumption).

## Chemical treatment of the water in the heating system

### ADVANTAGES DERIVING FROM CHEMICAL TREATMENT OF THE INSTALLATION

Chemical treatment of the water in the heating system has various advantages:

- prevention of corrosion
- quieter operation
- clean boilers and heat exchanger
- uniform heat across the entire surface of the heating appliance

All these advantages significantly improve the efficiency and performance of the system.

### RECOMMENDED CHEMICAL TREATMENTS

Products for heating system protection and prevention To protect the heating system, we recommend use of:

- an inhibitor to protect against lime scale and corrosion (an anti-freeze is also recommended for areas at high altitudes particularly at risk from very cold winter temperatures)
- noise reducer (descaler to remove lime scale from the pipes)
- for new installations, a specific cleaner is recommended to remove fabrication and installation debris
- for radiant panel installations, a sanitising agent and biocide is recommended to avoid the growth of bacteria and fungi which may clog pipes, manifolds, valves and heat exchangers

Products for heating system cleaning and maintenance Heating system maintenance requires the following:

- Sludge: a sludge remover should be used
  - Lime scale: a descaler should be used to remove deposits of lime scale (possibly combined with a sludge remover to remove sludge deposits)
  - Small leaks in the installation: if some joints drip, a liquid sealant can be used
  - Sludge/deposits/corrosion residues: in the case of installations seriously impaired by the presence of various types of residue and debris, the use of a pump and strong cleaning agent are recommended
- Neutral cleaning agents which do not corrode carbon steel should be used.

Problem	Cause	Solution
The pump shuts down after the boiler has been replaced	The pump is clogged by residues in the heating system	A cleanser (sludge remover) should be used, possibly together with a specific pump. Subsequently use of an inhibitor is recommended to prevent lime scale. Draining of the water at the end of treatment.
Noise in the boiler	There is lime scale in the heat exchanger	A noise reducer should be used. Subsequently use of an inhibitor is recommended to prevent lime scale
The primary heat exchanger is clogged	The debris formed by corrosion in the installation has accumulated where the passage of water is most difficult	A noise reducer should be used. Subsequently use of an inhibitor is recommended to prevent lime scale
The boiler shuts down	The anti-freeze used has reduced the heat exchange capacity of the water	Draining and change of the water; use of anti-freeze in combination with an inhibitor
The pressure in the installation rises and the air vent is activated	Hydrogen has been formed	Use of a corrosion inhibitor
The radiators are cold at the bottom	Sludge and debris have formed in the bottom of the radiators	A cleanser (sludge remover) should be used, possibly together with a specific pump. Subsequently use of an inhibitor is recommended to prevent lime scale. Draining of the water at the end of treatment.
Panel radiators do not become sufficiently hot	Organic sludge has formed in the tubes and pipes	Use of a sanitising agent, possibly together with a specific pump. Draining of the water at the end of treatment and addition of a new sanitising agent to the water in the new installation.
The pressure in the heating system drops	A small leak has formed at a joint or in a pipe	Use of a liquid sealant. Followed by use of a corrosion inhibitor.

## GENERAL CONDITIONS

The warranty conditions in this document are valid for all products in the RADIATORS line.

All exceptions to them are conditional solely and exclusively on written acceptance by RADIATORS.

## WARRANTIES

**HYDRONIC products:** The supplier guarantees, for a period of 15 years, all products in the line, with effect from the invoice date (unless otherwise indicated in the section corresponding to each product).

**ELECTRIC products:** The supplier guarantees the heating element for a period of 5 years and the electrical parts for 2 years, for all products in the line, with effect from the invoice date (unless otherwise indicated in the section corresponding to each product).

**CHROME products:** The supplier guarantees the galvanic treatment of the surfaces for a period of 2 years with effect from the invoice date (unless otherwise indicated in the section corresponding to each product).

The supplier further guarantees:

Sound execution in the construction of the material supplied according to the invoice.

Free repair or replacement of those parts that during the warranty period present flaws in materials, defects in manufacture or non-conformance with specifications rendering the component unfit for use.

The warranty will be effective following an examination of the defects and their causes, to be carried out by and on the premises of the supplier indicated by the latter. The new or repaired material will be delivered ex the supplier's warehouse. Any intervention covered under the warranty will not postpone nor renew the expiry of the original warranty period.

The RADIATORS S.P.A. warranty does not replace the warranty established by law, nor does it warrant or represent that the product will be suited to the Customer's needs or will function in combination with any third-party product.

## LIFETIME WARRANTY EXTENSION REGULATIONS

The extension of the standard warranty to a "Lifetime Warranty" is reserved solely for De' Longhi brand Radiators and Towel Rail Warmers for centralised heating or independent boilers with fixed installation purchased from authorised centres after 28.5.16 and by 31.12.2024, where expressly indicated in the package.

To benefit from the "Lifetime Warranty" promotion, the product must be installed exclusively with the De' Longhi accessories relating to Annex 1, "Lifetime Warranty Accessories".

The registration of purchase data\* (mandatory for obtaining your De' Longhi Lifetime Warranty certificate) must be done exclusively on the RADIATORS site at the following link <https://warranty.radiators-spa.it>

The data must be registered within 60 days of the date of purchase indicated on the purchase receipt or invoice.

## WARRANTY EXCLUSION CLAUSES

- If the data requested in the regulations is not duly registered within 60 days of the date of purchase (in the case of extension to the lifetime warranty).
- If the product is installed by unqualified personnel and/or not to industry standards.
- If the product is installed incorrectly or in a manner not compliant with the supplier's instructions.
- If the damages are caused by carelessness, tampering, modifications of the product, accidental causes or negligence of the purchaser, with particular regard to external parts, in the event of failures due to connections of the device to pressures other than those indicated or to sudden changes in pressure in the network to which the device is connected.
- If the radiators are connected to a system with operating pressure greater than that declared by the manufacturer.
- If the water in the system has not been treated with appropriate chemical additives.
- If in the process of tightening of radiator caps and reductions the tightening torque differs from that indicated in the technical catalogues.
- If during the battery nipples process accessories other than original RADIATORS accessories (nipples and white silicone gaskets) are used. Use the tightening torque indicated in the technical catalogues.
- If the non-scratch RADIATORS S.P.A. wrench is not used when assembling joints (for multi-column radiators).
- If radiators are connected to a domestic water system or a system with an open expansion tank.
- If in a new system it is not washed out to eliminate all possible pollutants, processing residues, oils, traces of products used to weld pipes, etc.
- If in old construction systems thorough washing has not been performed to remove encrustations and sludge deposits.
- If the operation and/or maintenance of the system has not been carried out in accordance with the operating and maintenance prescriptions set out in the manual accompanying the product and/or in the technical documentation. In particular:
  1. do not exceed the maximum operating pressure and temperature stated in the technical specifications.
  2. do not use water with a pH of less than 6.5 and more than 8.5. Always perform an adequate chemical treatment of water, especially in the case of hard water. The UNI 8065 standard, made mandatory by Italian Law 46/90, requires appropriate chemical water treatment in all heating systems. Italian Ministerial Decree 37/08 "System safety regulations" contemplates "the obligation to install systems to industry standards" and to apply existing regulations, using materials and components manufactured to industry standards, and thus also to refer to UNI 8065 on "Treatment of water in heating systems for civil use".
- If damages have been caused by the electrical power grid (failures or anomalies).
- Where antifreeze is used, it must never be used pure, but used according to the manufacturer's instructions before being put into the circuit.
- Where a corrosion inhibitor is used, it must be compatible with all materials present in the heating elements.
- If the damages are due to anomalies in the water main (high pressure, water hammer and similar phenomena).
- If the damages are attributable to wandering currents or if the shelves have not been properly insulated.
- If the radiator surfaces are cleaned with chemical cleaning products that may damage the paint. Radiators may only be cleaned using special soft cloths to avoid scratching the paint and dried only with fabrics washed with water.
- If the damages are due to weights and/or objects placed on the radiator or to people who make improper use of them (bench, shelf, step, etc.). Damages due to any improper, non-functional use.
- If the damages are due to rust owing to installation in aggressive environments such as saunas, swimming pools, urinals, etc.
- If the damages are due to improper size.
- If the damages are due to ice formation (filled radiator exposed to temperatures below 0°C).
- If the damages are due to the use of components or parts that are not original or not authorised by RADIATORS S.P.A.
- If the product suffers accidental damages caused by incidents, fires or accidents in general, or otherwise caused in shipping not organised by RADIATORS S.P.A. or there is found to be air and/or a lack of liquid in the circuit.
- If the product has been tampered with through adaptation or repair work without written authorisation from the supplier.
- If the buyer does not observe the established payment terms.
- If the warranty is not claimed in the legal terms and manner.

- If hemp or other insulating materials are used.
- If it is installed less than a metre from sources of water (edge of sink, shower stall, bath tub, toilet, bidet, etc.).
- The material has not been stored in good conditions and sheltered from inclement weather before it is installed.
- Where chemical tools and/or products that may damage the finish are used to clean products.
- Where, after initial filling, the heating elements remain without water and have not been periodically emptied.

#### **LIMITATION OF LIABILITY**

Within the limits permitted by law, RADIATORS S.P.A. disclaims all liability, according to all interpretations of liability, whether contractual, legal or in tort (including negligence), for any direct, indirect, fortuitous, specific, exemplary or consequential damages, loss of use or profits or interruption of business activity, or any other financial loss arising from or connected to the sale, installation, maintenance, use, performance or non-performance or failure of its products, and therefore limits its liability to repair, replacement or reimbursement of the price of purchase.

#### **RESERVATION OF RIGHTS**

RADIATORS S.P.A. reserves the right to make modifications to products, technical and size data at all times and without advance notice.

RADIATORS S.P.A. remains the owner of the product until the Customer completes the agreed payment.

The surfaces, yields, weights and all other data regarding radiators provided in price lists and catalogues are to be considered indicative and subject to tolerance ranges without price adjustments.

RADIATORS S.P.A. reserves the right to replace the models of its radiators without advance notice.

#### **GENERAL TERMS AND CONDITIONS OF SALE**

The following general terms and conditions of sale are deemed to be accepted at the moment the Customer receives the order confirmation from RADIATORS.

#### **CONDIZIONI DI PAGAMENTO**

Payments must be made in a legal currency to RADIATORS, Udine (Italy).

If payment is not made by the agreed term, late-payment interest shall be charged at the current bank rate.

Goods shall be supplied ex works.

Accessory components are invoiced separately.

Failure to supply accessory components that do not in any case impair use of the products delivered shall not entitle the Customer to suspend or delay payment for the products.

The Customer may not withhold or reduce the amount due on the basis of credit notes not yet issued or in relation to claims not acknowledged by RADIATORS.

It is expressly agreed that the Customer's obligation to pay shall be binding on the Customer, even in the event of a dispute and whatever the nature and significance thereof.

#### **TRANSPORT OF GOODS, PACKAGING AND CONSIGNMENT**

Unless expressly agreed otherwise, delivery times are always approximate and not binding.

Goods travel at the risk of the Customer.

Special packaging not otherwise provided for shall be invoiced separately.

Delays in delivery attributable to the carrier are not the liability of Radiators.

Extraordinary events, natural calamities or other causes of force majeure shall release RADIATORS from any mandatory delivery terms.

#### **CLAIMS AND RETURNED GOODS**

Claims for visible defects must be received by RADIATORS in writing no later than 8 days after receipt of the good.

For other defects, the above warranty conditions shall remain valid.

Prices may be subject to revision by RADIATORS according to the variations that may occur up to the time the order confirmation is received by the Customer.

No claims shall be accepted for goods altered or damaged by third parties or the Customer.

Returns are considered ex RADIATORS (ex RADIATORS' production plants in Udine (UD) only, not the company's registered office).

RADIATORS disclaims any obligation to replace its radiators for defects attributable to improper maintenance.

The installer must take out insurance against any possible water damage.

#### **TECHNICAL DATA**

The surface areas, performance, weights and all other data referring to the radiators, as stated in price lists and catalogues, shall be understood as indicative and comprehend working tolerances that are not subject to price adjustments;

#### **COURT WITH JURISDICTION**

For any controversy, the sole court with jurisdiction shall be the Court of Udine (Italy), excluding any derogations. RADIATORS S.P.A. reserves the right to replace its radiator models without prior notice.
